

## Summary of SVHC consultation substances and intention substances

As of September 13, 2023, a total of 14 SVHC consultation substances and intended substances have been published, including 7 consultation substances and 7 intended substances. It is worth noting that dibutyl phthalate (DBP), one of the seven consultation substances, was added to the SVHC in October 2008, and the second consultation was initiated because of the identification of a new hazard type for this substance. So up to now, there are actually only 13 consultation and intention substances that may be added to SVHC in the future, namely 6 consultation substances and 7 intention substances in addition to DBP.
