

EU Publishes Draft Implementing Regulation on Producer Registration under PPWR

On August 6, 2026, the European Commission issued a draft regulation establishing uniform rules for producer registration and reporting formats under the Packaging and Packaging Waste Regulation (EU) 2025/40. The draft aims to ensure that relevant information can be submitted through data processing systems, effectively fulfilling Extended Producer Responsibility (EPR) . The key points of the draft are as follows:

Format and data for registration

1.The formats for registration in the register of producers shall be as set out in Annex I and shall be used as follows:

- (a) Part A for registering a producer;
- (b) Part B for declaring how a producer meets its extended producer responsibility ;
- (c) Part C for proving a certificate issued by the producer responsibility organisation;
- (d) Part D for registering an authorised representative.

2. Member States that have established separate systems for the management of packaging waste shall ensure that the format set out in Annex I enables each separate system to be identified. Producers that make packaging available on the territory of the Member State and that participates in more than one system, must register separately in Parts B and C, the packaging covered by each system.

3. Information shall be submitted electronically via a data processing system that allows for a fully automated process and that supports bulk verification of producers' registration numbers and digital certificates referred to in Part C of Annex I certifying compliance with extended producer responsibility .

Format and data for reporting

1.The formats for reporting to the register of producers shall be as set out in Annex II and shall be used as follows:

- (a) Part A for producers who has made available 10 tonnes or more packaging available per calendar year on the territory of a Member State;
 - (b) Part B for producers who has made available less than 10 tonnes of packaging per calendar year on the territory of a Member State;
 - (c) Part C for quantities of separately collected single-use plastic beverage bottles and metal beverage containers with a capacity of up to three litres;
 - (d) Part D for quantities of packaging waste collected that do not fall under point (c);
 - (e) Part E for quantities of packaging waste disposed of, recovered or recycled within the Union;
 - (f) Part F for quantities of packaging waste disposed of, recovered or recycled outside the Union.
2. Member States that have established separate systems for the management of packaging waste shall ensure that the format set out in Annex II enables each separate system to be identified.
3. Packaging that is made available for the first time on the territory of the Member State and that is reported under Parts A and B of Annex II shall be reported on the basis of the predominant material, which is the material which accounts for the highest proportion by weight of the packaging, and of each separate component of a packaging unit. Where packaging contains multiple materials, including composite packaging, the weight of all constituent materials shall be reported in the respective columns.
4. The information reported under Parts A and B of Annex II to this Regulation shall be based on the technical documentation established in accordance with Annex VII to Regulation (EU) 2025/40 or an equivalent complete description of the packaging unit, including all integrated and separate components.
